BASIC H40 DESIGN OVERVIEW

Basic H40 is produced with the latest Digital-Surfacing technology that assures clear vision and good quality. The compromise between visual field has been effectively balanced so it provides wearers with stable and generous areas for both distance and near vision.

Alphas H40 has not only large, balanced visual areas, but also its power transition represents an advantage due to having a corridor characterized by allowing the eye to move naturally.

Prescribing simplicity saves time

The technology incorporated in this lens brings together the latest optics developments and the simplicity of prescribing found with traditional progressive lenses. Manufactured with the most advanced technology this lens doesn't require any special parameter measurements because it is similar to traditional progressive, but is produced on the back side. All of this is possible thanks to an innovative way of producing lenses with the progressive surface cut on the back, rather than the front side.
